Portal development

## CATALOGUE OF FUTURE SEMINARS

The method to obtain the available catalogue was through **manual inspection** of relevant URLs both from the directory of associations from Q1 and those found by the **bot developed** in Q2/Q3 from the list of scientific institutions.

providers

scientific societies  
research centers  
health centers  
science-related businesses  
research groups  
government bodies  
universities

## ROLE PLANNING FRONT-END AND BACKEND DEVELOPMENT OF THE APPLICATION

Considering the project's mantra: **Who are the Latin American researchers? Where do they develop Science? What are their scientific activities?**, user interface was designed using a single page template expressing and answering the mantra. The development of the various components in the system underwent many revisions, leaving a trace that is accessible. A final component in the system is the incorporation of a map to further visualize the **interrelatedness of the components**.

## PROJECT PORTAL

As a way to promote the ACAL Conecta project, and put forth the backstage developments, a portal was created to also engage with the **community of users and providers**.

A clearinghouse  
mechanism for the  
science in Latin  
America
